

Intelligent solution for medical preservation

Pharmaceutical Refrigerators are used to cool medical / pharma products for preservation. They include refrigeration units for storing vaccines and other medical or pharmaceutical supplies. Temperature variation can have an impact on the viability and efficacy of vaccines, reagents and other temperature-sensitive medical products. These variations can shorten product shelf life, degrade enzymes and reduce vaccine effectiveness. Therefore, it is important to choose a high-performance refrigerator that has been designed for the demanding standards of laboratory and clinical environment.

Newtronic Pharmaceutical Refrigerators maintain a consistent temperature in order to minimize the risk of degradation. It achieves a high degree of accuracy.
